To Whom It May Concern:

It is my pleasure to recommend the installation services of Ground Zero Electrostatics, Inc., of Bradenton, Florida.

I have personally been involved in several major projects requiring VPI static control tile that were installed by Ground Zero Electrostatics. In each case, our products were professionally installed using all procedures recommended by VPI Corporation.

It is noteworthy that Anthony Murfin, Vice President of Sales, has been personally involved at these project sites. Mr. Murfin is extremely knowledgeable about all aspects of static control tile and fully understands his primary objective is to provide world-class service to his customers and exceed all expectations associated with the installation.

Based on personal experience, I highly recommend your consideration of Ground Zero Electrostatics, Inc. for the installation of VPI static control tile; wall base and rubber stair treads for the Jabil Circuit project in Reynoso, Mexico.

Sincerely,

A handwritten signature in blue ink that reads 'Tom Reese'.

Thomas H. Reese  
Vice President – Sales  
VPI Corporation
